

Product Data Sheet: Drainage Channel

Grey2Green's galvanized steel drainage channels are designed to prevent water accumulation at facades or door thresholds

Material	Galvanised Steel
Dimensions	100cm or 200cm / Or telescopic
Height / Width	12 x 8 cm
Thickness	2mm
Apparent density	7850kg/m ³

The galvanized steel drainage channel is placed along facades and at door thresholds to avoid water accumulation. Channel extensions, 90 degree corners and T-connections can easily be made without the need of any additional parts.

The telescopic channel is a variable channel to extend up to a further length of 1m. The channels include a removable grating to allow for easy access to clean if required.
