

## Product Data Sheet: Verdant Blanket

Grey2Green's Verdant Blanket is UK grown and developed specifically as a wild flower coverage for green roofs. Consisting of 80 species, all of which are 100% UK native provenance, Verdant Blanket consists of only 5% grass to create a diverse and unique vegetation that will withstand the rigors of a green roof environment and provide forage for wildlife.

<b>Material</b>	HDPE mesh 25 mm organic layer
<b>Dimensions</b>	1m x 2m
<b>Depth</b>	30mm
<b>Weight</b>	15 kg/m <sup>2</sup> (dry) 35 kg/m <sup>2</sup> (saturated)
<b>Water storage capacity</b>	Currently under test, results to be confirmed.
<b>Consignment Size</b>	48m <sup>2</sup>

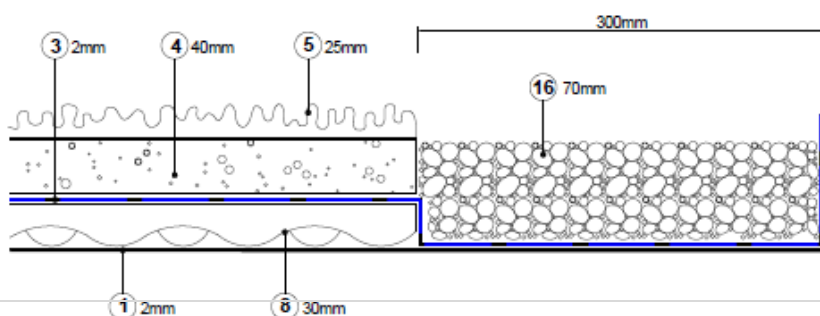

The provenance and mix of species has been prepared in consultation with leading ecologists who are members of the Institute of Ecology and Environmental Management and Chartered Environmentalists. Verdant Blanket supports a species assemblage that can be tailored to meet project requirements and ensure that BREEAM ECO ratings are maximised, Biodiversity Action Plan species are supported and that there is an overall gain in biodiversity, in accordance with Planning Policy Statement 9.

Grown at sites in the UK for next day delivery from farm to site in 12 hours.
